The Kenton County School district began using the CommunitySafe application in 2005 because of its speed and reliability. The district wanted an effective way to communicate closing and delay information to parents, students and faculty, as well as general informational messages.

“CommunitySafe has been excellent in training, working with individual schools, and supporting any and all questions and requests we have had.”

With over 1,800 staff members and 14,000 students enrolled in the district's 18 facilities, school administrators were in need of a way to communicate to all of these people quickly and easily in the event of an emergency.

Since adopting CommunitySafe, Kenton County School District began sending messages to parents about various concerns and issues. School administrators have received positive feedback from parents and staff about CommunitySafe.

“The support staff of CommunitySafe is always there, whenever we need them. They are very helpful and always have our best interest in mind“
